WHY AWT HEALTHCARE?

- Over 60 years of expertise in customized solutions for Clinical Research Labeling
- Focused & Proactive Budgetary Estimations
- Project Specific Consulting Services
- Experienced Project Management - 2,500+ projects per year
- CTM Customization Based on Your Exact Needs
- In-house Manufacturing / Controlled Flexibility
- Temperature Controlled Inventory Storage
- Dynamic Inventory Reporting & Material Expiration Management

CRYOGENIC LABELING

Increasingly Complex Molecules, Reliably Simple Label Solutions

Cryogenic Labeling

AWT has custom designs and simple label solutions for complex molecules and clinical cryogenic labeling challenges. AWT delivers applications in a variety of end markets, with deep expertise across Consumer Brands, Healthcare, and Technology industries.

BOOKLETS

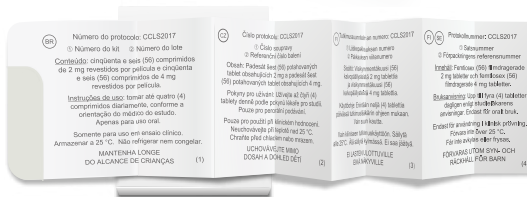

At AWT Healthcare, we manufacture booklets in house to control the flexibility and urgency of your clinical trial labeling needs. Every trial is unique, so finding the right size amongst the thousands of dies held in house or creating a new custom solution for your multifaceted CTM is seamless. The added benefit of free Booklet inventorying on site will help reduce cost and timelines for future campaigns, which is monitored by a strict inventory reporting system that is at your fingertips.

Split-Base Booklet

Concertina or Accordion-Style Booklet

BOOKLETS

Full Base Booklet

First 1-1/4" Adheres | Balance wraps around & self seals

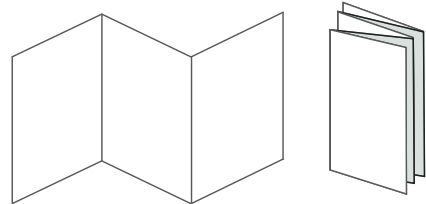

Shortened Base Booklet

First 1-1/4" Adheres | Last 9/16" Adheres

Split Base Booklet

Accordion-Style Booklet

LABELS

Single & Multi-Panel Labels

Printed labels are available in many different configurations, including single and multi-panel, complete with your choice of stock, tints, and designs. Whether blank or printed, our quality assurance team will ensure perfection regarding your clinical studies. Thermal and digital variable printing / back-numbering are also available upon request. No matter what the CTM, let our experts develop a solution that meets your specific needs.

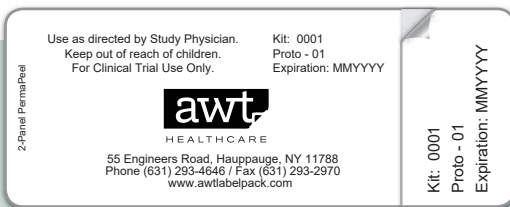

UNIQUE SOLUTIONS & STOCK

Perma-Peel™ Labels

This unique solution of dual layered substrates removes the meticulous application process of the 2-panel flagging label and replaces it with the ease and precision of a 1-panel label. The base layer is designed to perform like a 1-panel label during application and can be used on automated labeling equipment, while a portion of the top layer is designed to be removable to accommodate on site recording in a case report file.

Multi-Adhesive Labels

The multi-adhesive label utilizes a combination of permanent, deadened and removable adhesives that aim to deliver superior performance over a traditional 1-panel flag label. The 1st section of the label utilizes a permanent portion to adhere to the circumference of the CTM, while the deadened non-adhesive portion then wraps the CTM as many times as necessary to fit the required text. The last section of the label utilizes a removable adhesive that won't peel away text while providing a firm seal that can be opened and closed to view the text that has been overlapped.

UNIQUE SOLUTIONS & STOCK

Scratch-off Laminates

This cost-effective alternative to IVRS has been used for decades. During the event of an adverse patient reaction, the clear top laminate is detached to allow for the scratch off portion to be removed. Under the scratch off portion the drug dose is easily visible to provide immediate unblinding results.

Tamper Evident Seals

Protecting the patients' safety is the number one goal during the clinical supply chain process. What better way to do so then providing tamper evident labeled cartons and packers? There are multiple customized options for creating a secure solution through distribution for any range of CTM.

UNIQUE SOLUTIONS & STOCK

Tube Labels

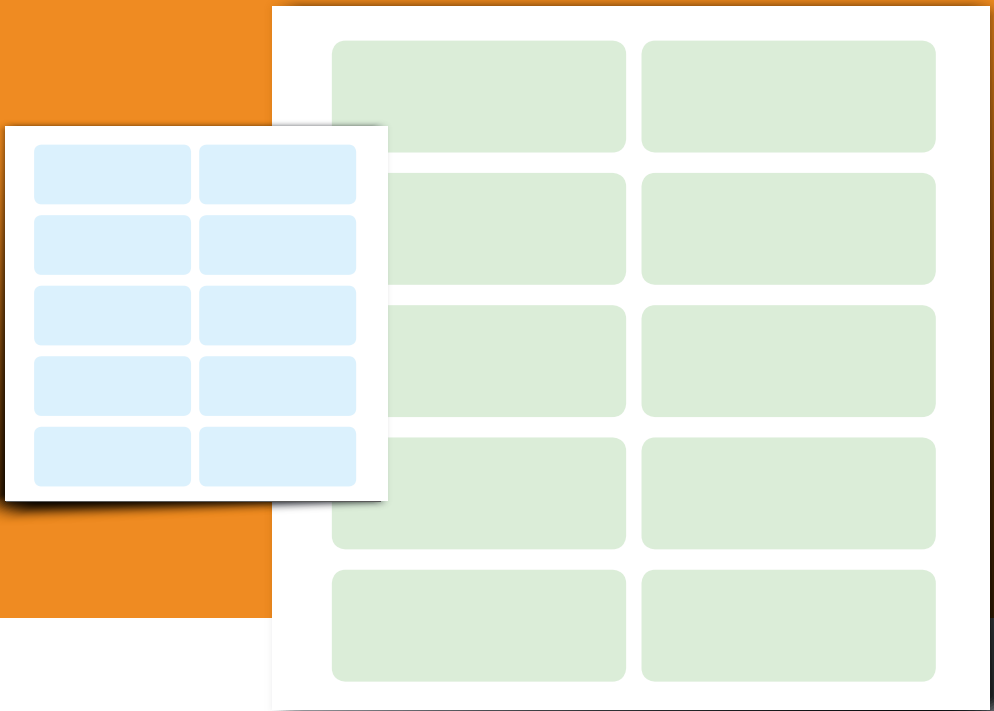

Tubes can often be difficult to blind, especially when the comparator is a slightly different size. The label design team at AWT Healthcare specializes in blinding multiple tubes with a Poly based material that will withstand the abuse of lotions and gels. Multi-panel tube designs are also available based on your protocol and can be customized to your unique needs.

Expiry Updates

Modern technology has introduced an emerging market of large molecule drug products that have relatively short expiry periods. Utilizing thoughtful label designs and intuitive communication, AWT Healthcare can plan for multiple expiry updates through the course of your trial with simple and cost-effective solutions for ensuring your product is delivered on time to the patient.

STOCK

Blank Labels

Have your own printers? Let AWT Healthcare create your blank labels! Choose from our expansive collection of dies or request one in your custom size. We have a broad set of label stocks and layouts that will make any printing application easy. We also have extensive experience in designing labels for machine application. All custom products can also be provided in blank formats.

ON-DEMAND PRINTING

On-Demand Printing

On-Demand Printing is a cost-effective solution that enables clients to effortlessly create and print in-house, high-quality, customized color labels. Clients can eliminate the need for preprinted label inventory and waste, production downtime, lost orders, or late shipments due to changes.

The AWT team guides our clients to the optimal on-demand label printer solution to meet their label printing needs ranging from one color barcode labels, to full, photographic multi-color quality labels. AWT is an elite partner for Epson and Zebra printers, providing expert knowledge of the products, sales, service, support, training, installation, and depot repair services.

- Complete line of standard and custom certified labels for medical applications
- Guaranteed performance and peace of mind
- High quality and reliable adhesion performance with superior print quality
- Maximize printer performance, up-time
- Excellent customer service and technical support
